Backing vehicles and equipment are a serious occupational hazard. To help prevent backover injuries and deaths, NIOSH recommends a number of standard operating procedures:

- Create and enforce an operating procedure that addresses how to work safely and lists best practices to follow when working near vehicles and other equipment.

- Take precautions. Use equipment that creates minimal blind spots or has proximity warning devices.

- Hire a competent person to supervise worksites involving backing vehicles and equipment.

- Use barrels, barricades, cones or reflective devices to guide vehicles and equipment away from workers.

- Establish safety procedures for working at night with backing equipment. Ensure high-visibility apparel is worn.

- Before work begins, design the worksites to minimize or eliminate the need for backing vehicles and equipment.

- Be sure drivers know not to back up equipment unless they are under the direction of a spotter.

- Post signs informing workers where it is safe to walk.
